IMS commentary

- The Target Date Index Fund invests in a well diversified portfolio of underlying Funds that are passively managed. The Fund is designed for members who are planning to retire by or around 2025. The overall portfolio mix of the Target Date Index Fund is composed of fixed income Funds as well as domestic and foreign equity Funds which may differ in investment manager. The underlying Funds may also include Funds that represent specialty or alternative asset classes and which are promoted under the i-Watch Investment Program. In order to reflect the evolving risk profile of investors as they approach their target retirement date, the Target Date Index Fund is rebalanced on a quarterly basis to its target asset allocation and this target asset allocation is then gradually realigned (on an annual basis) towards a more conservative investor profile.
- Based on our due diligence, we are confident that the manager has remained within the stated investment philosophy and style.

Conclusion:

- Due to the fact that the Fund's asset allocation and performance are in line with expectations (given its target date profile), IMS continues to rate this Fund In Good Standing.
